

Error Log AddCoins

```
// Prompt the user for the number of pennies, nickels, dimes, and quarters
System.out.print("Enter the amount of pennies: ");
```

I forgot to finish my line of code by using the semi colon function. As a result the program prompted an error.

```
// Call the getDollarAmount method and display the total dollar amount
String totalAmount = getDollarAmount(pennies, nickels, dimes, quarters);
```

An error was issued here prompting that this variable was not declared.

```
System.out.print("Enter the amount of pennies: ");
int Pennies = scanner.nextInt();
```

I looked through my code and realized at the beginning when I declared my variable for pennies I used a capital P instead of a lowercase p. I resolved the error by using a lowercase P to declare my variable.
