

Error Log Group Assignment

```
// Prompt the user for their first and last name  
System.out.print("Please Enter Your First Name: ");
```

I forgot to end the sentence with the semi-colon function. As a result it displayed an error.

```
} else if (firstLet >= 'J' && firstLet <= 'S') {  
    group = "Group 2";
```

An error was prompted to me as it did not recognize the variable. As a result I resembled the error by using a lowercase f to recognize my variable.
