}
```

An error was prompted in these 2 lines of codes, as i analyzed i realized that my pen variable is supposed to have a lowercase p letter instead of a capital P. I resolved the issue by using a lowercase p to declare my variable.

```
10 private int dime; // Number of dimes
11
12 private int quart; // Number of quarters
13
```

An error was prompted here since I was supposed to use 2 slashes to add a comment. I quickly resolved the issue by adding another slash.
