

Error Log PrimeNumber

```
System.out.println(number + " is a prime number.");  
else {
```

An error occurred when i realized i forgot to add the semi colon function.

```
//check for factors from 2 to the square root of num  
for (int PriNum = 2; priNum <= Math.sqrt(num); priNum++) {  
    if (num % priNum == 0) {
```

an error was prompted here for my variables since one of the variables had an uppercase P it did not recognize the other declared variable.

```
20  
21 } else {  
22     System.out.println(number + " is not a prime number.");  
23 }  
24
```

An error was prompted here when I realized I forgot to add a curly bracket.
