ErrorLogs LunchOrder And Food

LunchOrder

```
105              System.out.println("  Carbs: " + colaCarbs + "g");
106
107              System.Out.println("  Fiber: " + colaFiber + "g");
108
109       //Print total cost and nutrition values
```

The letter O is supposed to be a lowercase o because java is sensitiv with upper and lowercase.

```
113
114          System.out.println("Total carbs: " + (burgerCarbs + saladCarbs + friesCarbs + colaCarbs) + "g")
```

**I forgot to add a semi colon function to end my line of code.**

```
84       System.out.println("Green Salad:");
85
86          System.out.println("  Fat: " + SaladFat + "g");
87
88          System.out.println("  Carbs: " + saladCarbs + "g");
89
```

An error was prompted here aout my saladFat variable, i analyzed and realized since I declared my saladFat variable as a lowercase s java was confused on why I added an uppercase S i quickly resembledd the issue by adding a lowercase s instead of uppercase S.

Food

```
19
20          this.Carbs = carbs;
21
```

An error occurred here prompting that something was wrong with my Carbs variable, i relaized i was supposed to use a capital C instead of lowercase c.

```
35
36⊖    public int getCarbs(){
37
38      return carbs;
```

I forgot to add brackets here, i resolved the issue by adding opening and closing brackets.
