GuessingGame Error Log

```
// continue until the user guess.
while (guess != SecretNumber) {
```

An error occurred prompting that it did not recognize the variable. I realized that my secretNumber variable was lowercase s instead of an uppercase S. I resolved that issue by putting a lowercase s.

```
22
23          guess = input.nextInt()
```

I forgot the semicolon function at the end of my sentence, as a result the system prompted an error.
